TITLE &
ABSTRACT

Advanced Academic Final Year Projects

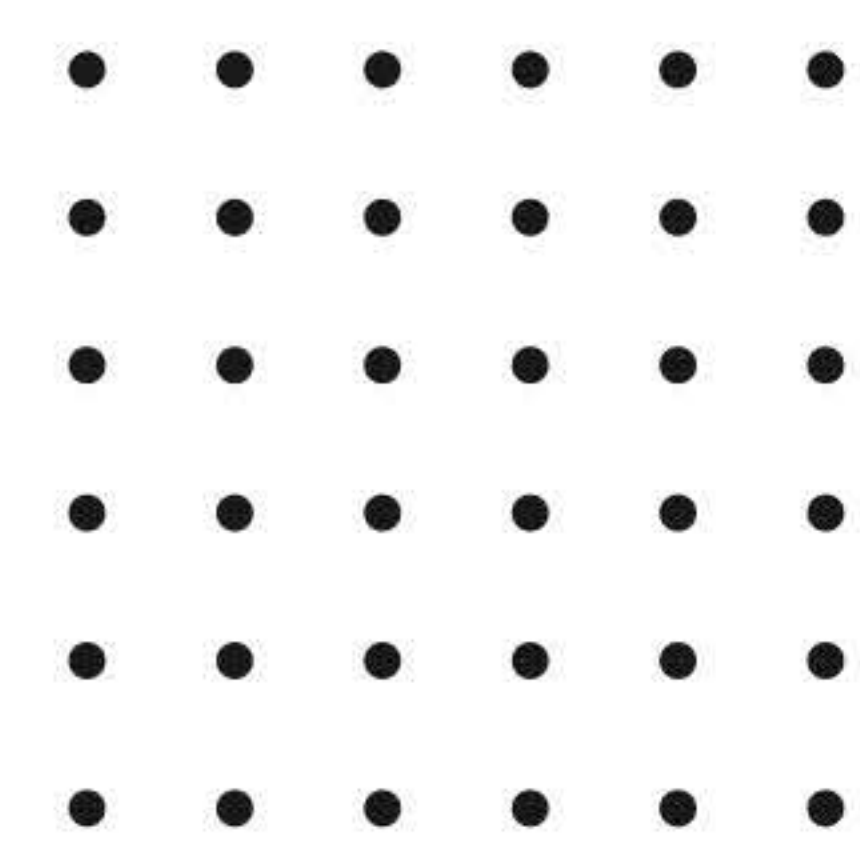

CampusFund: College Event Sponsor Management Portal

CampusFund is a Django-based web portal designed to manage sponsorship activities for college events. Event organizers can create event profiles, specify sponsorship requirements, and track sponsor applications through the system. Sponsors can browse available events and submit sponsorship proposals based on their interests. Administrators can verify sponsors, manage requests, and monitor sponsorship activities. The platform provides a centralized and organized approach to college event sponsorship management.

TalentBid: Skill Exchange and Task Bidding System

TalentBid is a Django-based skill exchange platform that connects users requiring services with individuals offering specific skills. Users can post tasks with descriptions, deadlines, budgets, and required skills. Service providers can browse available tasks and submit bids based on their expertise and availability. The system manages user profiles, bids, task assignments, and completion status. It provides an organized platform for skill-based collaboration and task management.

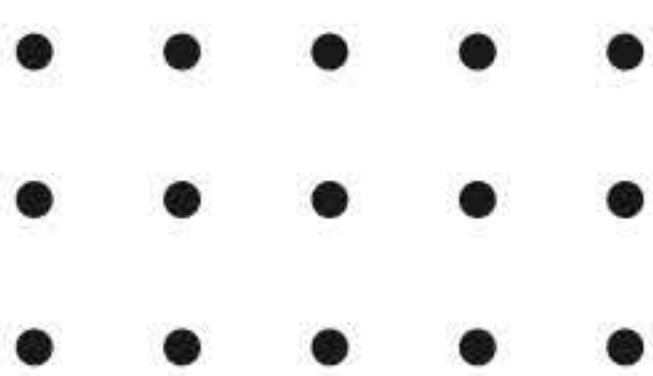

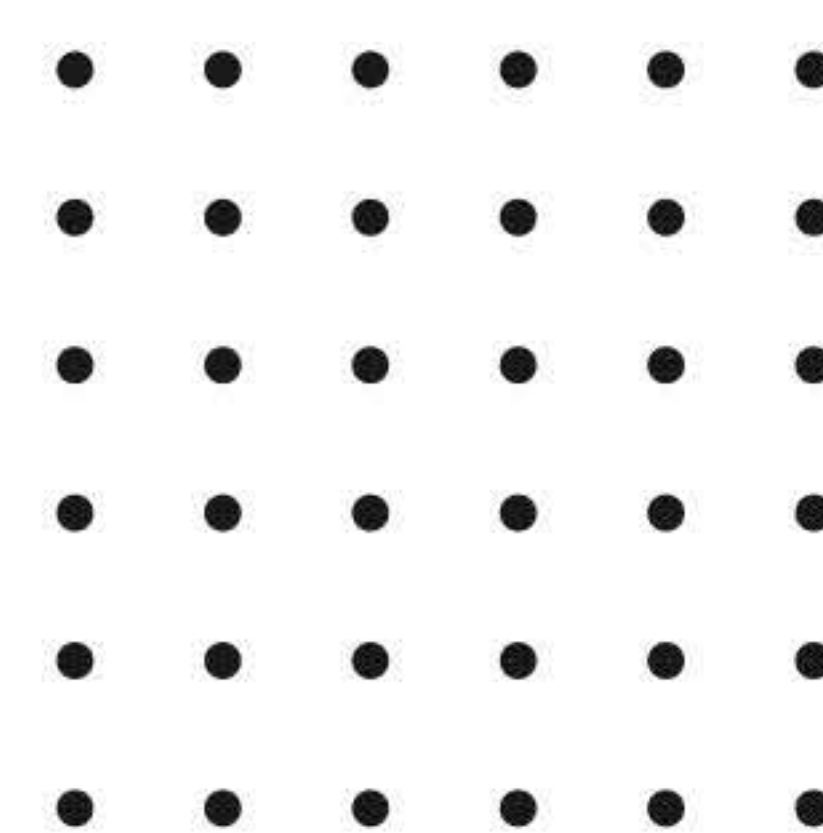

CampusDorm Secure: Hostel Incident Reporting Portal

CampusDorm Secure is a Django-based hostel incident reporting system designed to simplify the reporting and management of student issues. Students can submit complaints related to maintenance, safety, infrastructure, discipline, or other hostel concerns. Hostel administrators can review incidents, assign them to responsible staff, and update resolution status. The system maintains a centralized history of reported incidents and actions taken. It improves communication, accountability, and hostel issue resolution.

RescueLink: Emergency Volunteer Management Platform

RescueLink is a Django-based emergency volunteer management platform that connects organizations with volunteers during emergency situations. Volunteers can register their skills, availability, location, and preferred areas of support. Organizations can create emergency requests and identify suitable volunteers based on their requirements. Administrators can coordinate volunteer assignments and monitor ongoing activities. The platform improves emergency response coordination and enables faster mobilization of community volunteers.

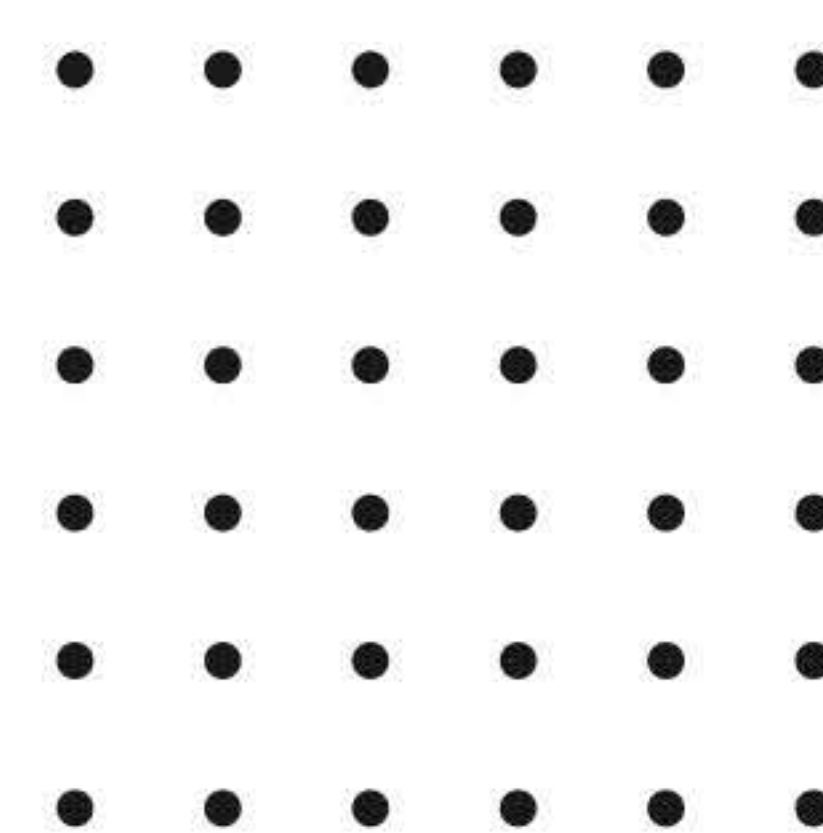

IdeaFund: Local Business Funding Platform

IdeaFund is a Django-based funding platform designed to connect local business owners and entrepreneurs with potential funders. Business users can create project profiles containing business ideas, funding requirements, goals, and supporting information. Investors or funders can browse available opportunities and express interest in suitable projects. Administrators can verify business profiles and monitor funding activities. The system provides a centralized platform for discovering and supporting local business opportunities.

MediTransfer: Pharmacy-to-Pharmacy Stock Exchange

MediTransfer is a Django-based pharmacy inventory exchange platform that enables pharmacies to share information about excess or required medicine stock. Pharmacies can list available medicines, quantities, expiry information, and transfer requirements. Other pharmacies can search for required medicines and submit stock transfer requests. Administrators can monitor transactions and maintain pharmacy and medicine records. The platform helps improve inventory utilization and reduce medicine shortages or unnecessary stock accumulation.

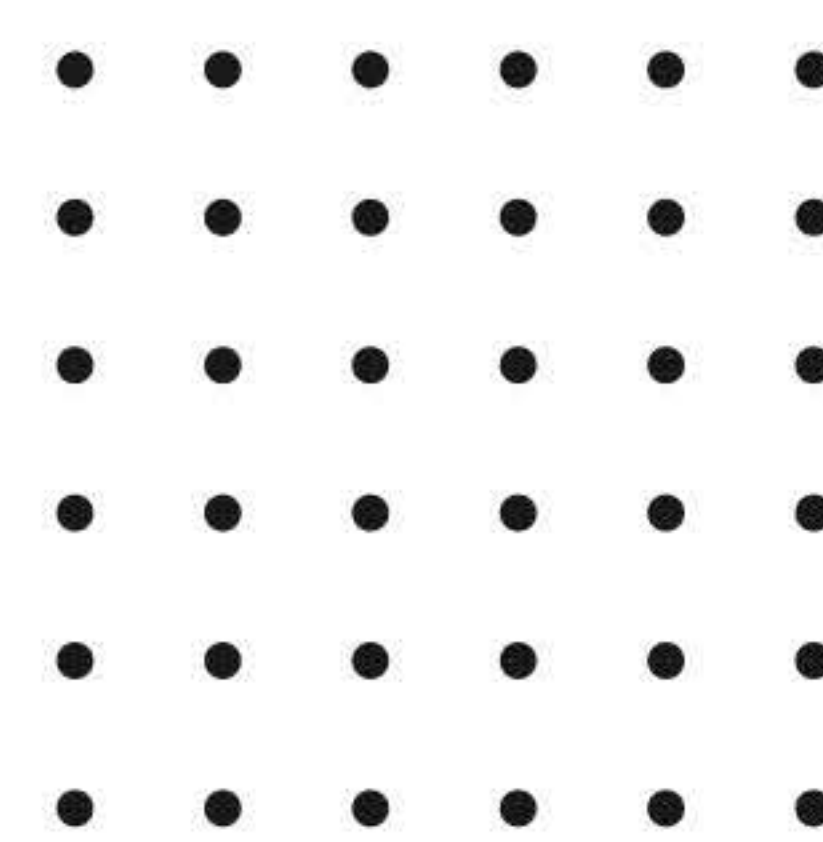

FactoryLink: Manufacturer-to-Retailer Marketplace

FactoryLink is a Django-based B2B marketplace that connects manufacturers directly with retailers. Manufacturers can publish product details, pricing, available quantities, and business terms through the platform. Retailers can search products, compare supplier information, and submit purchase requests. The system manages supplier profiles, product listings, orders, and transaction status. It simplifies manufacturer-retailer communication and supports efficient wholesale product sourcing.

PriceWise: Local Retail Price Comparison Platform

PriceWise is a Django-based platform designed to help customers compare product prices across local retail stores. Retailers can update product names, prices, stock availability, and store information through their accounts. Customers can search for products and compare prices from multiple nearby retailers. The system highlights price differences and helps users identify suitable purchasing options. It improves price transparency and supports informed local shopping decisions.

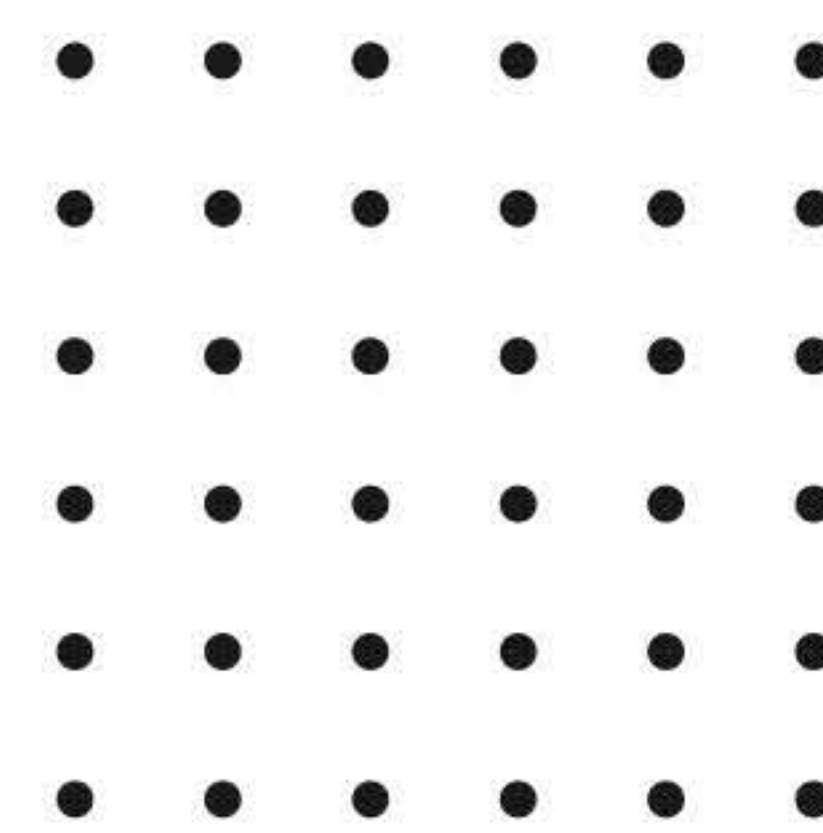

IdeaBox: Product Suggestion Management System

IdeaBox is a Django-based product suggestion management platform that allows customers to submit ideas and feedback about products or services. Users can create suggestions, describe proposed improvements, and track their submission status. Administrators or product teams can review suggestions, categorize them, and update their implementation status. Voting or rating features can help identify the most valuable ideas. The system provides a structured approach to collecting and managing customer-driven product improvements.

MealReserve: Smart Food Pre-Booking System

MealReserve is a Django-based food pre-booking platform designed for cafeterias, hostels, offices, or institutional dining facilities. Users can view available meals, select quantities, and reserve food before a specified deadline. Administrators can manage menus, pricing, daily availability, and booking information. The system generates reservation records that help food providers estimate demand accurately. It reduces food wastage and improves meal preparation and distribution efficiency.

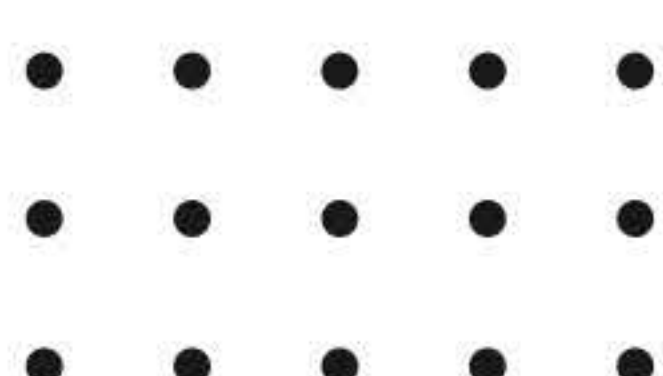

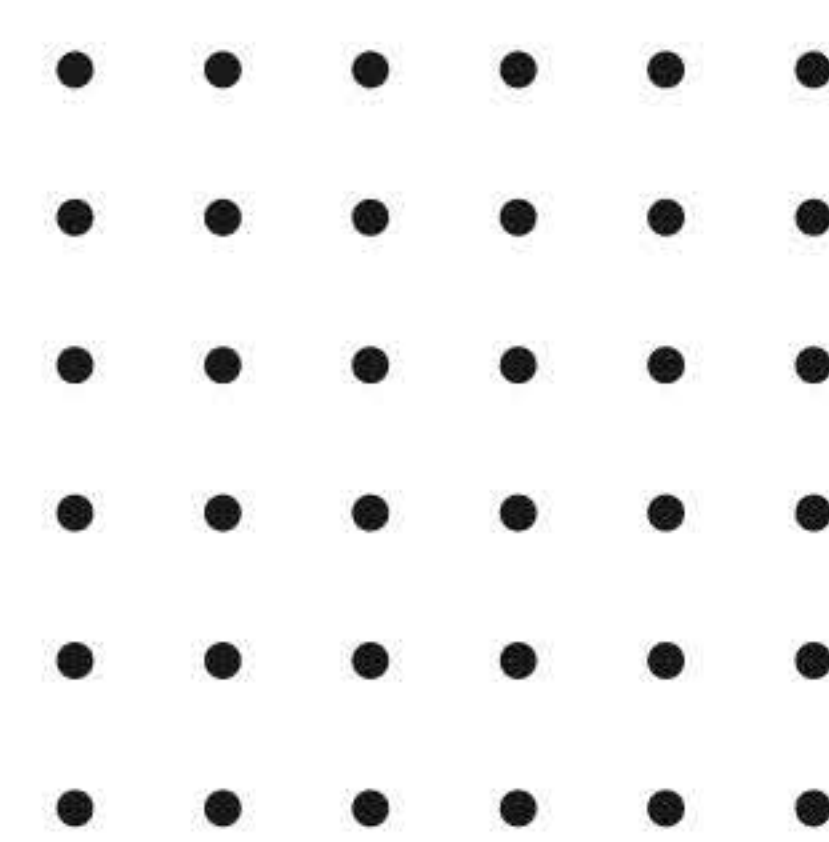

SkillGrow: Verified Free Learning Platform

SkillGrow is a Django-based learning platform that provides users with access to verified free educational resources. Administrators can add courses, learning materials, tutorials, and skill-development resources to the platform. Users can browse content based on categories, topics, and skill requirements and track their learning progress. Verification mechanisms help maintain the quality and authenticity of listed resources. The platform promotes accessible and structured skill development without requiring paid subscriptions.

ElderMeals: Home-Cooked Food Delivery System

ElderMeals is a Django-based food delivery platform designed to connect elderly individuals with home-cooked meal providers. Meal providers can publish available dishes, nutritional information, pricing, and delivery schedules. Users or authorized family members can browse menus and place meal orders according to their requirements. The system manages orders, delivery status, and meal-provider information. It provides a convenient platform for accessing suitable home-cooked meals and supporting regular meal delivery.

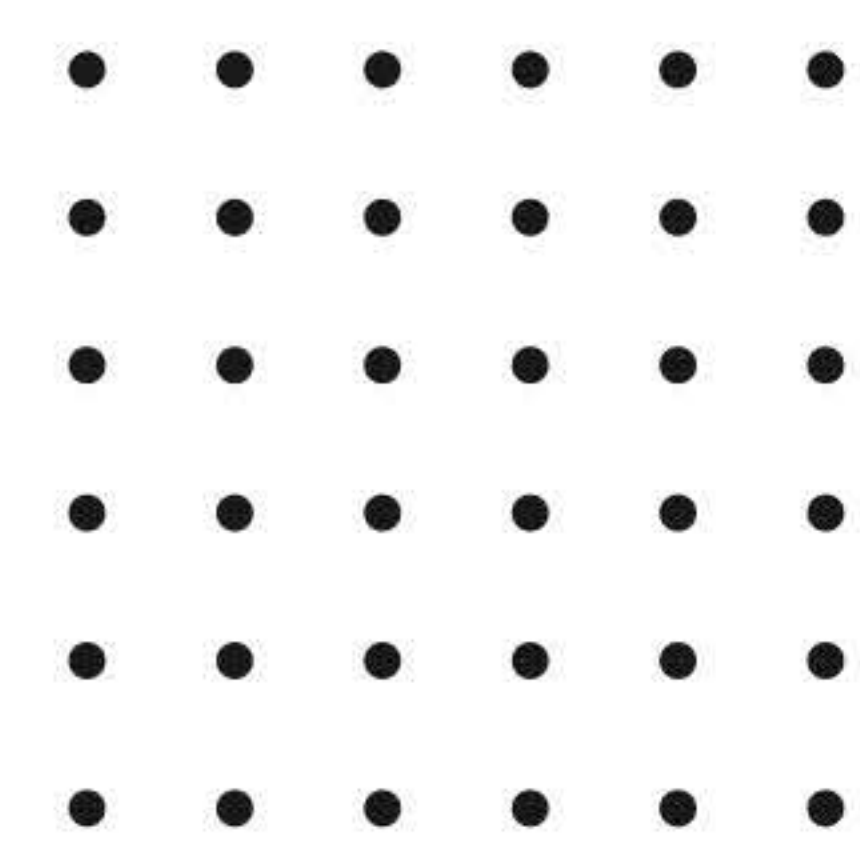

HopeBridge: Orphanage Fundraising Platform

HopeBridge is a Django-based fundraising platform designed to connect orphanages with individuals and organizations willing to provide financial support. Registered orphanages can create verified profiles and publish funding requirements for education, food, healthcare, and infrastructure. Donors can browse campaigns and contribute to suitable fundraising activities through the platform. Administrators can verify organizations and monitor campaign information. The system improves transparency and provides a centralized platform for supporting orphanage initiatives.

FarmGear: Cooperative Equipment Sharing System

FarmGear is a Django-based agricultural equipment-sharing platform designed to help farmers access farming machinery through cooperative sharing. Farmers can list equipment such as tractors, harvesters, pumps, or other agricultural tools with availability and usage details. Other members can search equipment and request it for specific dates or farming activities. The system manages reservations, equipment availability, and user records. It improves equipment utilization and reduces the cost of purchasing expensive agricultural machinery individually.

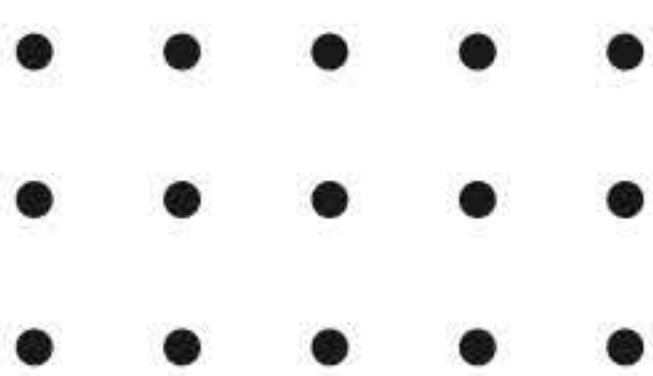

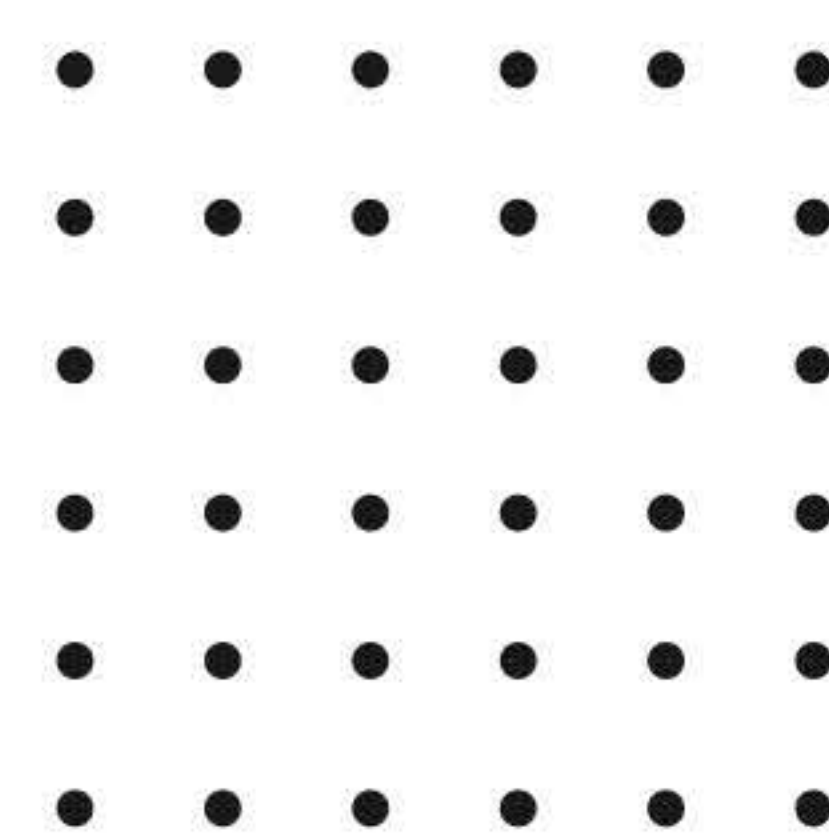

ServiceHandoff – Verified Technician-Client Job Closure Board

ServiceHandoff is a Django-based platform for managing the completion and handover of technician-client service jobs. Technicians can update job progress, record completed work, upload service evidence, and submit closure requests. Clients can review completed work and confirm whether the service has been satisfactorily completed. The system maintains job status, technician information, client feedback, and closure records. It improves accountability and provides a transparent process for completing service assignments.

StockChef: Smart Kitchen Inventory System

StockChef is a Django-based kitchen inventory management system designed to monitor food ingredients and kitchen supplies. Users can record ingredients, quantities, purchase dates, expiry dates, and stock consumption. The system tracks inventory levels and can provide alerts when ingredients are running low or approaching expiry. Administrators can analyze consumption patterns and manage stock efficiently. The platform helps reduce food wastage and supports better kitchen inventory planning.

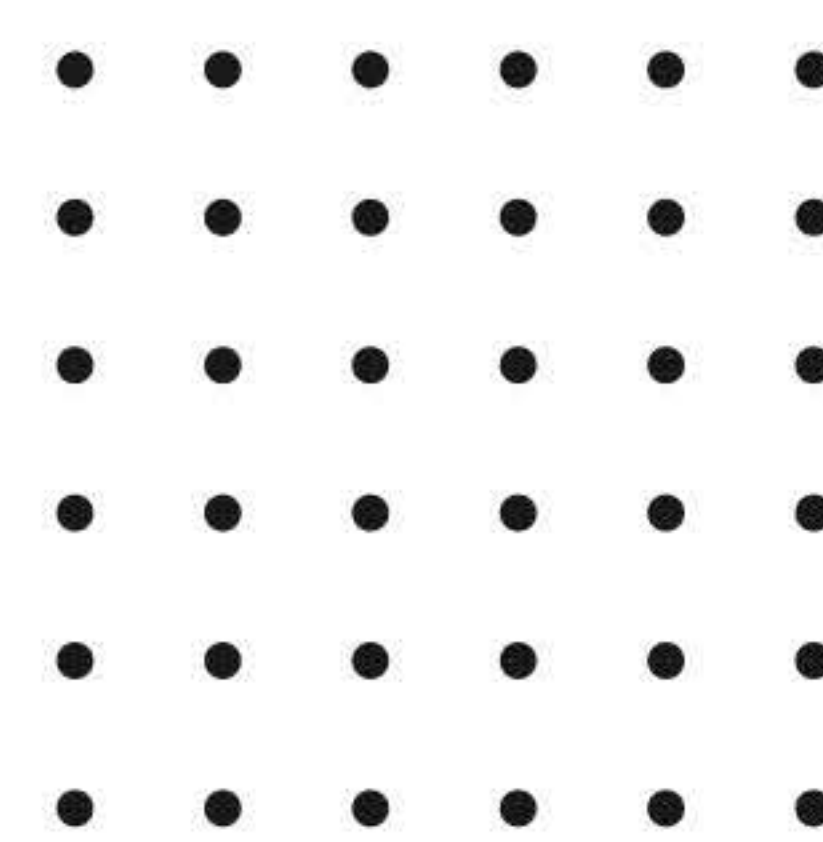

HandoffLog: Shift Knowledge Transfer System

HandoffLog is a Django-based shift knowledge transfer platform designed to improve communication between employees working in different shifts. Employees can record important tasks, pending activities, incidents, updates, and instructions before completing their shift. The incoming team can review previous shift information and acknowledge important handover details. Administrators can monitor handover records and maintain historical information. The system reduces communication gaps and improves continuity between work shifts.

TrustShield: Scam Reporting Network

TrustShield is a Django-based scam reporting platform that allows users to report suspicious websites, phone numbers, transactions, sellers, or online activities. Users can submit incident details and supporting evidence for review. Administrators can verify reports, categorize scams, and maintain a searchable database of reported incidents. Other users can search existing reports before interacting with suspicious entities. The platform promotes community awareness and helps users identify potential online scams.

PillSearch: Medicine Availability System

PillSearch is a Django-based medicine availability platform designed to help users locate medicines across registered pharmacies. Pharmacies can update medicine names, quantities, prices, and availability through their accounts. Users can search for required medicines and view pharmacies where stock is currently available. The system can organize medicine and pharmacy information for faster searching. It provides a convenient solution for finding medicines and improving visibility of pharmacy stock.

SmartSavings: Financial Goal Management Platform

SmartSavings is a Django-based financial goal management platform designed to help users plan and monitor personal savings objectives. Users can create goals such as education, travel, emergency funds, or major purchases with target amounts and deadlines. The system tracks deposits, calculates progress, and displays the remaining amount required to achieve each goal. Users can review their savings history and monitor progress through dashboards. The platform encourages disciplined saving and supports structured personal financial planning.
